

INSTALLATION SPECIFICATION FOR INTERFACE CARPET TILE

Ensure that the sub floor is clean, level, smooth and permanently dry and free from rising moisture as per AS/NZS 2455-1995.

Adhesive to be used shall be 'INTERTAC' as manufactured for Interface carpet tile. Application of adhesive shall be by the 'Full Spread' method. All Interface tiles are to be laid directly into INTERTAC releasable adhesive that has been allowed to tack off. Colour will change to 'clear' texture [from Green] and not transfer to the back of the tile.

Carpet tile shall be installed by qualified contractors in accordance with Interface's installation manual (last revised June 1, 2002 – available on www.interfacenz.com/documents) and as directed by AS/NZS 2455.2 (Standard for installation practises of carpet tile) published by Standards N.Z.
